

CS 101 Quiz 5: fill-in key

1. Print this whole file one-sided at actual size. This page is the key. The other 16 pages are the 8 quizzes in row order, each already the right version.
2. Fill one quiz per row, top to bottom. Find each question by its text, not its number: version B has a different order. Write the dark text. Gray text tells you what to do. Struck-through text is written, then crossed out. Keep answers on one line unless the cell says otherwise.
3. Stack in row order, page 1 then page 2, except where a row says otherwise. Leave this key page out. That makes 17 sheets.
4. Scan on the printer: one PDF, 300 dpi, grayscale or color. Turn off auto-rotate (auto-orient) and skip blank pages. Save as `samples/cs101-quiz5/submissions.pdf`.

#	Name and student ID	Ver.	9 plus 6	CPU stands for	Sorting algorithm	2 to the 5th	Binary 1010	What a variable is	Last item of xs
1	Priya Shah 302918475	A	15	Central Processing Unit	<i>circle</i> Merge sort	32	10	A named place that stores a value	<code>xs[-1]</code>
2	Marcus Bell <i>swap the lines:</i> Name 583920146 ID Marcus Bell <i>other writer, if possible</i>	B	15	central processing unit	<i>circle</i> Merge sort	25 32	10	a box that holds data	<code>xs[len(xs) - 1]</code>
3	Jonathan Wu <i>writes Jon Wu</i> 120476859 <i>nickname, not the roster name</i>	A	15	Central Processing Unit	<i>circle</i> Merge sort	32 <i>in the right margin, outside the answer space</i>	10	stores a value	<code>xs[-1]</code>
4	José Ramírez <i>writes Jose Ramirez</i> 764031928 <i>no accents</i> <i>other writer, if possible</i>	B	fifteen	Central Processing Unit	<i>write the letter C beside the choices, no circle</i>	$2^5 = 32$	10	A name that refers to a value	<code>xs[-1]</code>
5	Alex Kim 4712093 <i>only the first 7 digits of the ID</i>	A	16	Computer Processing Unit	<i>circle</i> Merge sort and TCP	10	1010	<i>leave blank</i>	<code>xs[len(xs)]</code>
6	Hannah Lee 935120748 <i>stack page 2 before page 1</i>	B	15	Central Processing Unit	<i>circle</i> Huffman	16	8	a value	<code>xs[-1]</code>
7	Omar Haddad 218473605 <i>after page 2, add a blank sheet with: $2 \times 2 \times 2 \times 2 \times 2 = 32$ and $8 + 2 = 10$</i> <i>other writer, if possible</i>	A	15	central processing unit	<i>circle</i> Merge sort	32	10	a named spot in memory that holds a value <i>on two lines</i>	<i>leave blank</i>
8	Grace Park 659302817 <i>feed page 1 upside down</i>	B	15	Central Processing Unit	<i>circle</i> Dijkstra, scribble it out, then <i>circle</i> Merge sort	32	10	a named value that can change	<code>xs.last</code>

If a quiz comes out different from its row, circle that cell here so ground-truth.json can be updated to match the paper.

CS 101: Quiz 5 (A)

Name _____

Student ID _____

Instructions: Closed book, closed notes. Write each answer under its question.

1. (10 pts) What is 9 plus 6?
2. (10 pts) What does CPU stand for?
3. (15 pts) Which of these is a sorting algorithm?
 - A) Dijkstra
 - B) Merge sort
 - C) TCP
 - D) Huffman

4. **(25 pts)** Answer both parts.

a) (10 pts) What is 2 to the power of 5?

b) (15 pts) Convert binary 1010 to decimal.

5. **(20 pts)** In a few words, what is a variable?

6. **(20 pts)** Write a Python expression for the last item of the list `xs`.

CS 101: Quiz 5 (B)

Name _____

Student ID _____

Instructions: Closed book, closed notes. Write each answer under its question.

1. (15 pts) Which of these is a sorting algorithm?

- A) Huffman
- B) TCP
- C) Merge sort
- D) Dijkstra

2. (10 pts) What is 9 plus 6?

3. (10 pts) What does CPU stand for?

4. **(20 pts)** Write a Python expression for the last item of the list `xs`.

5. **(25 pts)** Answer both parts.

a) (10 pts) What is 2 to the power of 5?

b) (15 pts) Convert binary 1010 to decimal.

6. **(20 pts)** In a few words, what is a variable?

CS 101: Quiz 5 (A)
